

"Companies lose up to \$3,000 per year per employee due to non-business related Internet activity" (**IDC Research**)

"Over the past four years, the number of reports of child pornography sites to the National Center for Missing & Exploited Children (NCMEC) has grown by almost 400 percent." (**Christian Science Monitor**)

Protection from inappropriate internet content at home, school or at your place of business is our only business.

iSentryIII™

Content Filtering Appliances

"Firewall Servers iSentryIII™ Content Filtering Appliances provides the best price/performance for home, SOHO, schools, libraries and business."

Preventing objectionable Internet content from being accessed can be a daunting task. In the past, libraries, schools, government agencies and business have spent millions of dollars trying to keep up with the daily addition of 500,000 new web pages. Unfortunately, a high percentage of these are inappropriate, sometimes illegal or dangerous and non-productive web pages.

Small offices and home users (SOHO) have had few options, most expensive, to counteract this deluge of unsuitable content. Schools and libraries that receive eRate funds are mandated by congress under CIPA to provide web content filtering.

The innovative iSentryIII content filtering appliance meets everyone's needs by providing just the right scaling of hardware for the best possible price without increasing response times or sacrificing filtering accuracy. ISentryIII will:

- Prevent viewing of objectionable inappropriate content
- Five filter groups allows distinct filtering criteria to be applied based on the member's age, job function, etc.
- Bypass feature permits temporary access outside of the group's defined web viewing parameters
- Prevent downloading of executable files and copyright material such as music
- Automatically update the blocking database to add the latest objectionable pages

Plug-and Play is truly achieved with the iSentryIII appliance family. The unit is shipped with all of the software installed and fully tested. Installation is accomplished by connecting one Ethernet cable from the appliance into your router/firewall and one Ethernet cable from the appliance to your switch.

Setup is accomplished through the administrator's console utilizing the integrated Webmin GUI. There are no files to compile, merge or link.

Fully integrated Appliance

Each iSentryIII is delivered as a fully integrated hardware/software system configured for one group, transparent operation. After installation, additional groups can be easily activated. Choice of filtering criteria is selected from the administrator' console. A one year update subscription is bundled with each iSentryIII appliance.

Ease of Installation

Each unit is shipped with all software fully installed, tested and ready for operation. Typical installation time is 10 minutes. There are no changes¹ to be made to the user's workstations. Supports mixed installations of OS: Windows 98/ME/2000/NT/XP; Mac, Unix as well as most browsers: Firefox, IE, Opera, etc.

Reporting

In depth reporting is available through the integrated log analyzer. Data is presented in both tabulated text and in graphical format.

Price/Performance Optimization

Four models are available, each optimally configured to provide the best price/performance content filtering appliance in the industry. All utilize high performance, stable technology designed to achieve the highest performance at the most competitive price. When properly sized to fit the specific installation there will be no noticeable degradation in web browsing performance.

Superior Web Filtering

Multiple web filtering techniques assures the most reliable and consistent prevention of undesirable content. Each user's request is checked against a resident database for banned URL addresses, file types, keywords and regular expressions.

User Defined Options

User defined Trusted-Only list – allows only user specified sites to be accessed.

Login Protection – Login can be required for users to access the web.

Banned Site Bypass – With administrator defined password, user may access a banned site.

5 User Groups

Up to 5 unique groups can be defined to provide custom filter criteria for diverse users based on age, job description, religious preference, etc.

MODEL	DESCRIPTION
iSentryIII-A	For home/small business (up to 10 workstations)
iSentryIII-B	For schools, libraries and businesses with up to 299 workstations
iSentryIII-C	For businesses with up to 599 workstations
iSentryIII-D	For businesses with up to 1500 workstations

A second year update subscription, when purchased with the appliance, receives a 25% discount off of subscription list price.

Note 1: When all workstations are in a single group. Multiple groups require a simple change to be made to the proxy settings in the browser for all units outside the basic transparent group.
